Team Seahawk®
**ENHANCED GEARS FOR
INTENSIFIED ACTION**

Team Seahawk is the enhanced and upgraded Seahawk series with overall improvements using the latest and most powerful technology and materials, making it Seahawk's best-in-class. Working with our international partners, Team Seahawk range offers the best engineered materials and components loaded with the latest available innovative fishing technology, all while staying in line with Seahawk's accessible price point.

Team Seahawk tackle range is for the most serious of anglers, and not for the faintest of hearts.

XLG SYSTEM

XTENDED LINE GUIDE SYSTEM

The XLG stands for Extended Line Guide system, which is a system that extends the length of the line guide's exterior to increase the line passage distance between line guide exit and spool. This creates a more natural angle during line transition between spool and line guide, resulting in a noticeably smoother cast.

ALUMINUM FRAME

A full aluminium body is more rigid and durable than a conventional graphite one. Graphite may be lighter and cheaper, but is known to flex under higher drag settings caused by pressure when fighting big fish. This affects alignment and leads to wear and tear of the gear.

Aluminum is a top quality material that is popular for being highly anti-corrosive, having solid strength and its high durability. Team Seahawk aluminium body reels are precision-machined to high tolerances for greater performance. With an aluminium body, you can fight bigger fish without worrying about issues caused by flex. Without flex, you get better alignment, smoother gear, and overall a longer lasting reel.

Aircraft-grade aluminium alloy (6061-T6) that is stronger yet lighter than steel, highly versatile and corrosion resistant. Team Seahawk's T6 Duralumin is specially engineered and heat-treated to reach much higher levels of strength and durability. A duralumin frame keeps reels light without sacrificing strength and maintains gear alignment even under heavy loads for a lasting smooth performance.

CDS

CARBON DRAG SYSTEM

New generation drag washers made from high quality carbon fibre drag material known for its astounding stopping power, exceptional smoothness and high heat tolerance. These are inter-stacked and complimented with quality metal washers that work together to evenly distribute friction to optimize consistency throughout reel performance.

SLIMTECH

BODY FRAME

The SlimTech Body Frame feature creates a thinner and more streamlined reel profile to achieve a more natural and comfortable fit in the palm. This results in a lighter reel that offers anglers better overall cast control.

XLG MKII SYSTEM

XTENDED LINE GUIDE SYSTEM

The XLG Mark-2 is an upgraded version of the original XLG System. It further incorporates a V-Shape Ceramic Line Guide. This ultra-smooth and friction-free ceramic line guide tapers into a V shape at the end, reducing the size of the line exit point of the line guide. This results in a more concentrated line focal point which produces a more targeted and focused cast for exceptional casting accuracy.

This in turn boosts casting accuracy to achieve the ultimate casting experience.

N.F.B.S.

ANTI-BACKLASH SYSTEM

An advanced brake system that additionally slows down the turning spool after casting to allow for more control, longer casts and to prevent line twists.

HYPER 9.3 SPEED

The latest technology in casting, Hyper Speed reels come in a ratio of 8.0:1 or higher (e.g. Team Seahawk's Blitzkrieg with 9.3:1). The high ratio increases line retrieve with each turn of the handle during cranking, making it perfect for techniques involving fast-retrieve of artificial lures such as top-water lures.

DDS

DUAL DRAG SYSTEM

The Dual Drag System introduces a secondary drag system to compliment the main drag. Compared to singular drag reels, our reels featuring the DDS combine the best of both worlds—a Magnetic Drag and a Centrifugal Drag. With this system, anglers can choose between using only one drag or engaging both drags. This secondary drag—a drag set with a very light setting that creates a "controlled free spool"—applies just enough tension to keep the reel from unspooling too quickly into a tangled mess but light enough to allow the fish to run with the bait without feeling spooked. This additional time allows the fish a higher chance of properly getting the bait into its mouth, creating a more solid hook-up.

Musha 武者

CUSTOM MADE FOR EXTREME SALTWATER JIGGING
ENGINEERED BY CHIMUSHIHOKE

The Musha jigging reel is developed with the serious angler in mind. It is engineered using superior heavy-duty 17-4 grade stainless steel spool shaft and fully machined strong one-piece aluminum frame. This ensures that moving parts are kept in solid alignment while also maintaining rigid control under heavy loading while fighting big fish. Its exquisite quality anti-corrosion ball bearings and helical cut gear delivers smooth topnotch performance from the minute the line is cast, during rigorous fighting and until retrieve. All-in-all, this is a serious premium reel for the serious angler.

Features :

- 9 + 1 stainless steel ball bearing.
- Topless frame design.
- Precision machined solid one piece aluminium frame.
- Heavy duty 17-4 grade stainless steel spool shaft.
- Anti-corrosion stainless steel ball bearings.
- Helical cut stainless steel gear for extreme smoothness and meshing
- Lever controlled dual carbon drag ensures a smooth all rounded performance even when wet
- High density EVA round knob for a firm and comfortable grip
- Sharp clicking sound of drag alarm

HIGH DENSITY EVA KNOB ALUMINIUM BODY

MUSHA BAITCASTING REEL						
Model	Ball Bearing	Gear Ratio	Line Retrieve Per Crank (cm)	Line Capacity (PE-m)	Wt (g)	Max Drag (kg)
20SHL	9 + 1	6.3:1	96	2-550, 3-400, 4-320	492	23

Red-Gunsmoke Colour

FULLY MACHINED ALUMINUM FRAME

A strong, rigid, one-piece fully machined frame crafted using heavy-duty 17-4 grade aluminum encases moving parts to maintain precise alignment and stays rigid under heavy pressure during wild fights with big fish.

CARBON DRAG SYSTEM (CDS)

The surface of the drag is specially coated with a formula that prevents water absorption and contamination. The design of the drag is crafted to ensure proper heat displacement and maintain a steady friction to deliver a wide and smooth operation throughout all settings.

ANTI-CORROSION BEARINGS

Premium quality NMB stainless steel ball bearings prevent corrosion and maintain a smooth operation during release and retrieve of the line.

CUSTOM STAINLESS STEEL HANDLE

A specially designed 115mm stainless steel handle made to provide a comfortable grip for better cranking power during powerful fights with big fish.

DRAG LEVER

A counter clockwise turn of the knob increases drag pressure, and clockwise for less pressure. This drag is designed to be easy to use while offering constant and reliable settings ranging from FREE (no pressure), to FIGHT (when a strike occurs) to FULL (extra drag pressure).

HEAVY DUTY STAINLESS STEEL GEARS

High modulus, heat-forged, heavy duty stainless steel gears ensure excellent strength, smoothness and superior durability.

EVA POWER KNOB

A large high density EVA ball-shaped handle knob offers added comfort with a firm grip and ultimate handle control; an essential for wet environments and when the fishing gets wild.

COLD FORGED SPOOL & SIDEPLATES

Crafted using the latest method in cold-forging technology, the super strong spool & sideplates have no problems facing line pressure during heavy-handed vicious fights.

BARRICADE SW

BARRICADE SW Large Capacity Low Profile Baitcasting Reel

Team Seahawk Barricade SW saltwater large capacity low profile baitcasting reel series is a high-performance reel in a lightweight package. This tech-packed baitcaster promises performance on par with global brands of similar class level that far outweighs its affordable price point.

Features :

- Heavy Duty Brass Drive Gear
- Precision Machine Cut Brass Pinion Gear
- CRT : Corrosion-Resistant Treatment
- Double Anodized Ultra Deep Spool
- Multi-Disc High Output Carbon Drag System
- Micro-Click Drag Star for Precise Drag Setting
- 6HPB + 1RB Corrosion Resistant Stainless Steel Bearings
- Dual Anti-Reverse for Maximum Reliability
- Quick-Set Anti-Reverse Roller Bearing
- 6-Pin Thrust Control Casting System
- Ceramic Line Guide Inserts for Use with Braided Line
- On/Off Clicker for Trolling, Chunking or Bait Fishing
- Synchronized Level Winding
- Adjustable Jigging Handle 70mm/90mm

XEON

Unleashing the latest in technology, the XEON baitcaster incorporates Japanese Reinforced Hamai Micro Gear System that creates notably premium high-precision gears to offer astoundingly smooth continuous gear meshing for maximum fluidity and extended durability. In designing this superior caster, we combined the technology of XLG MKII (Extended Line Guide) — a system that increases the distance of the line guide exit with the spool to achieve a more natural line angle from spool to line guide for excellent smoothness — with a ceramic V-shape line guide that minimizes casting focal point for exceptional casting accuracy. What's more, we trimmed the reel profile using SLIMTECH technology for a better and more comfortable fit in the palm to achieve unparalleled cast control. With the XEON baitcaster, anglers can be confident they'll achieve a better fishing experience with first-rate control in the wild chaotic world of fishing.

XEON 103HSL

Features :

- Gear Ratio 7.2:1 high speed
- Magnetic Cast Control
- Japan Technology Hamai Micro Gear System
- XLG MKII (Extended Line Guide) system for further cast distance
- Ceramic v-shape line guide for exceptional casting accuracy
- Low Noise spool design
- Premium rubber soft knob for a firm comfortable grip
- Supported Pinion Gear for extra smooth and stable spool spin
- Tournament Drag System
- Infinite One Way Clutch
- SlimTech reel profile for superior cast control
- Audible tension knob click function

INSTINCT

ENGINEERED BY CHIMUSHIHOKU

A new instinctive gear has been crafted for anglers – the INSTINCT.

With an ultra high speed of 8.1:1, make light work of teasing and reeling in mighty fighters of the deep. Take full control of your casts using the Korean tech, DDS Dual Drag System; featuring a Magnetic drag and a Centrifugal drag. What's more, we streamlined the levelwind using XLG eXtended Line Guide System and combined it with ultra wear-resistance gear. This enables an exceptionally smooth cast that casts 20% further with boosted accuracy, and a reel that stands up to the wear and tear of battle – an ultimate caster especially for longcast lovers

Features :

- Ultra hyper speed 8.1:1
- Multi disc carbon drag
- Infinite anti-reverse
- Magnetic force brake system
- Ultra wear-resisting line guide
- Rubber knob

BLITZKRIEG ALX

Blitzkrieg - Team Seahawk's latest machine is an Xtra Hyper Speed (XHSL) low profile casting reel made after the brand's fishing rod of the same name. The name 'Blitzkrieg' is inspired from a German term meaning 'lightning war' - an intense military tactic intended to bring about a swift victory.

The Blitzkrieg is the first casting reel of its kind to boast an ultra hyper retrieve ratio of 9.3:1. It is excellent for flippin' and pitchin' top water performers such as buzzbaits and crankbaits; a perfect match for anglers who're seeking for the thrill of teasing and ensnaring Toman (Snakehead), Black Bass and even Giant Trevally using poppers and pencils.

The stylish matt-black and gold-rimmed compact gem is machined with high-quality factory sealed 10+1 stainless steel ball bearings that ensure the machine churns smoothly and cranks easily. The reel's infinite anti-reverse, one-way clutch bearing and power drive gear provide anglers with complete control during stop and go retrieves.

On top of that, an ultra wear-resistant level wind (line guide) and remote-torque carbon drag system that dishes out 6kg of max drag pressure team up to deliver a smooth and uninterrupted retrieve. Anglers can put their minds at ease even whilst engaging hard-running fish with the added leverage from the reel's 100mm swept handle with custom EVA knob.

Designed to fight, the Team Seahawk Blitzkrieg is a mean machine loaded for war and won't take no for an answer.

Features :

- 10 + 1 stainless steel ball bearing
- Ultra hyper speed 9.3:1
- Remote-torque carbon drag system
- Hi-speed ball bearing and SUS ball bearing
- Infinite anti-reverse
- Magnetic force brake system
- Ultra wear-resisting line guide
- EVA handle knob

BASS LTD BAITCASTING REEL					
Model	Ball Bearing	Gear Ratio	Line Capacity (mm / yards)	Weight (g)	Max Drag (kg)
LTD 103L	4 + 1	7.0:1	0.26/200, 0.28/160, 0.30/120	220	9

A system of high quality components developed specifically to protect against corrosive saltwater elements for a longer lifespan. Includes a sealed drag system, corrosion-resistant stainless steel power drive gear, main shaft, instant anti-reverse, and 9+1 silky-smooth double-sealed bearings.

Military grade carbon fiber drag material provides consistency and optimises performance with amazing stopping power, exceptional smoothness and high heat tolerance. Produces up to 18kg (40lb) drag pressure on tough game fish.

All-metal body protects and maintains gear alignment under extreme loads. Works in combination with 360 Saltwater Protection system to safeguard against saltwater elements for a longer lifespan.

Compared to conventional drag systems using felt washers, Team Seahawk reels incorporate carefully developed Hybrid-Felt washers.

These washers—when compared to normal felt washers—are enforced with an additional alloy to further withstand increased drag and improve heat distribution caused by friction. This prolongs the shelf life of the washers, even while constantly fighting bigger and heavier fish.

A full aluminium body is more rigid and durable than a conventional graphite one. Graphite may be lighter and cheaper, but is known to flex under higher drag settings caused by pressure when fighting big fish. This affects alignment and leads to wear and tear of the gear.

Aluminum is a top quality material that is popular for being highly anti-corrosive, having solid strength and its high durability. Team Seahawk aluminium body reels are precision-machined to high tolerances for greater performance. With an aluminium body, you can fight bigger fish without worrying about issues caused by flex. Without flex, you get better alignment, smoother gear, and overall a longer lasting reel.

Uniquely engineered gears built to maximise endurance that are also specially designed to ensure proper meshing of the drive and pinion gear for a solid and smooth retrieve.

The TRU-Smooth system incorporates the latest in Japan fishing technology that creates an ultra-smooth spool spin for the ultimate experience in casting.

The Dura Air Rotor technology focuses on maximising air rotor durability compared to standard air rotors. Its unique shape is designed to distribute pressure evenly throughout the rotor to create balance in line lay, increase smoothness, and prolong endurance.

The bail arm on our reel is ergonomically engineered for maximum strength and rigidity. Its shape is specially designed through careful research to enable a more natural and smoother transition between line and line roller during spinning to minimize tangling or line breakage.

Fine-tuned, precision machine-cut spool using super lightweight aluminum alloy to achieve excellent balance.

Ergonomically designed to avoid fatigue of the hand and improve the grip even in wet conditions.

Usually involving speeds of 6.0:1 to 7.0:1 or higher (above 5.0:1 for spinning reels) and allows anglers to keep up with fast-moving fish that causes slack in line.

Also known as the Infinite Anti-Reverse, the clutch bearing essentially locks up if rotation is in the wrong direction. This mechanism

prevents the handle shaft from rotating backwards and causing tangles in the line. This way, anglers have complete control such as during stop-and-go retrieve.

The C-Loop Propelling System incorporates professional engineering that creates an angular slant at the outer edge of the spool to minimize line friction and maximise fluidity of projection for a notably smooth and steady cast.

Usually, a common dilemma is choosing between the high price of a full aluminum body that is lightweight, and a cheaper and durable yet heavier graphite body. By combining aluminum and carbon, we are able to offer the best of both worlds—the lightness of carbon and the endurance of aluminum—with an affordable price tag.

Ball bearings reduce rotational friction to offer a smooth performance. Stainless steel ball bearings are treated to reduce moisture. This minimizes corrosion and increases durability. Team Seahawk reels come with quality assured, corrosion-resistant stainless steel ball bearings to maintain exceptional smoothness and maximise endurance.

Carefully-selected lightweight materials for ease of use, portability and reduced fatigue during prolonged fights with fish.

BLAST GOLD SW

EXQUISITE EXCELLENCE, STELLAR PERFORMANCE

Blast Gold series sets a new gold standard in affordable saltwater fishing reels. This high-performance reel incorporates advanced Japanese technology and design concepts, and is loaded with premium features usually reserved for higher-end saltwater reels; at a price far less than expected.

The main highlight of this reel is an all-metal body that keeps the reel sturdy and maintains gear alignment under heavy loads. A full metal rotor further increases toughness and strength. In addition, the Blast Gold sports Seahawk's 360 Saltwater Protection; a system consisting of high quality components developed specifically to protect against corrosive saltwater elements for a longer lifespan—corrosion-resistant stainless steel power drive gear, main shaft, instant anti-reverse and 9 silky-smooth double-sealed stainless steel bearings for a substantially smooth crank. What's more, it's also powerfully equipped to put up to 18kg (40lb) of pressure on tough game fish, so you can focus on fighting without worry.

If you're a saltwater fanatic serious about landing big fish, the Blast Gold series is a top choice for one of the smoothest, strongest pieces of machinery you can find in the market today, at a price that can't be beat!

Feature:

- 9+1 Double Sealed Stainless Steel Ball Bearing
- Stainless Steel Power Drive Gear & Main Shaft
- Full Dura-Metal Body and Stainless Steel Rotor
- Stainless Steel Infinite One Way Clutch Anti-Reverse
- Double Anodized High Precision CNC Aluminum Spool
- Dual Propulsion Anti-Twist Line Roller
- Saltwater 360 Protection
- CDS Carbon Drag System
- 18kg (40lb) Max Drag

RONIN 4000

RONIN

FINESSE AND VIRTUOSITY

The Ronin is all about bringing your long-cast experience to the next level. The reel is feature Team Seahawk's Tru-Smooth System— additional bearings on the shaft for a quicker, smoother spool rotation that maximises casting distance—and C-Loop Propelling System; a reduced angle on the spool lip for less line friction for extra smoothness. Both these features combine to create an effortless cast that covers an amazing distance. All that silky-smooth operation is protected by a solid zero flex Tough-Bodyz frame for a perfectly consistent alignment. Reach further and cast faster with this winner in your palm.

ACTION - Rod action refers to the flexing characteristic of a rod and is a measure of how much the rod flexes, and just as importantly, where that flex occurs along the length of the shaft. "Extra Fast" actions concentrate more on the flex towards the tip. "Slow" actions distribute the flex progressively throughout the entire blank. "Moderate" action rods fall in between the two actions.

POWER - The "Power" of a rod refers to how much pressure / force it takes to make it bend. Different rod powers are designed to handle a certain range of lure weights and line sizes. The heavier the line and lure, the more power you'll need to cast, fight and pull effectively. The lighter the line and lure, the less power you'll need.

LIGHTWEIGHT CONSTRUCTION

Our rods are constructed using the highest quality in material, meaning they are made for durability with an emphasis on lightweight-ness.

NANO LITE TECH

The latest in nano-lite technology from Japan—fineness at its finest—used solely for our light jigging rod range which requires a strong backbone, powerful performance and immense lifting power.

SLIM TECH CONSTRUCTION

Team Seahawk's Slim Tech utilises an exclusive technology to achieve a slimmer blank profile with higher strength and durability, yet lighter than conventional solid fiberglass. Vastly popular for jigging.

HMCC-30T

HIGH MODULUS CARBON CONSTRUCTION

Stands for High Modulus Carbon Construction 30Ton. Specially constructed by Team Seahawk using high strength carbon fiber material to achieve an ultra-light, highly responsive and durable blank. Provides excellent performance with tremendous backbone and lifting power. Perfect for advanced anglers looking for a high performance rod.

NOTE: Requires proper storage and care as blanks are powerful but brittle.

Tangle Free
K GUIDE
For Best Performance

The name FUJI needs no introduction. This Japanese brand set the global standard for high quality, high performance rod guides and is the leading rod guide manufacturer in the world. After nearly 5 years of testing and design, FUJI debuted its new K-series guides.

These guides are ingeniously designed for tangle-free fishing (whether braided, mono or fluorocarbon lines) and made of titanium for the ultimate in corrosion resistance, light weight and durability—Team Seahawk rods consist of the highest quality of guides in the FUJI range such as FUJI Alconite, Torzite, and SiC for maximum performance and consistency with tangle-free casting.

GRAPHITE X WRAP

The X-Wrap Construction is a technologically advanced method that consists of inter-wrapping one layer of super high-density carbon ribbon inside the blank with another layer on the outside. This innovative method results in a surprisingly powerful cast using minimal effort.

HMSC

HIGH MODULUS SOLID CARBON BLANK

Team Seahawk's customised High Modulus Solid Carbon construction results in a blank that's super light and responsive. Its even weight distribution creates a high-strain rod that's super parabolic and nearly indestructible – even if fully bent all the way. Offers great value and performance with increased casting efficiency and accuracy. Ideal for targeting large fish when lifting power is not a concern.

HIGH MODULUS ROD BLANK CONSTRUCTION IM7

New and improved from its predecessor—the IM6—the IM7 is a more lightweight, fast-dampening rod blank designed for maximum casting distance. This blank is formulated for rods with moderate to fast actions and where ultra-sensitivity is vital. Perfect for both floating and sinking lines and crafted with a strong backbone for big fish.

HIGH DENSITY EVA KNOB

Ergonomically designed knob grips to avoid fatigue of the hand and to improve the grip even in wet conditions.

KINGDOM XTREME

When you need to haul in the big ones, you bring in the big guns—enter KINGDOM XTREME heavy game jigging rod series! With its max drag up to a hefty 27kg, this rod means business, BIG business. High quality HMSC blank construction lined with renowned Japanese FUJI K-guides means you get greater lightness for longer fights, plus higher sensitivity and a reliably smooth casting performance. Made using superior components, this rod is made not only to fight and thrash colossal fish and other titans of the sea, it's also made to last 'til kingdom come. Get ready for the thrill of the salty seas!

MONSTROUS

High Modulus Solid Carbon Rod

Team Seahawk's Monstrous is a heavy-duty jigging rod with impressive backbone power that's light and comfortable enough for all-day jigging. With its high-quality HMSC construction, you get greater sensitivity and lightness compared to conventional fiberglass or composite rods. Its butt joint design makes this rod as sensitive and reliable as a one-piece and as easy to carry around and travel with as a two-piece. Additionally, this rod comes fitted with top-notch K-guides to ensure reduced line resistance for a remarkably smooth performance. When it comes to picking an affordable rod with superior balance, comfort and strength that's powerful enough to battle large predators of the deep, Monstrous is your best bet. What's more, with its high-quality components, you can expect this rod to last a long time.

Features:

- Designed for heavy duty jigging
- High quality HMSC (High Modulus Solid Carbon) construction increases rod sensitivity
- Lightweight blank for all-day jigging comfort
- Fuji K-Guides reduces line friction for a smooth performance
- High Density EVA for a firm yet comfortable grip
- Butt joint
- Max drag up to 15kg

BLACK VENOM ブラックヴェノム

The Black Venom is designed to be the ultimate lure fishing rod, specially made for medium to heavy cover fishing. This limited edition handmade rod is versatile for both freshwater and saltwater conditions, with a fast action that guarantees excellent sensitivity and solid hook sets.

The rod features a strong ultra-lightweight blank—only 151g—thanks to Seahawk's HMCC-30T custom construction, created using a light and perfectly balanced 30-ton high modulus carbon. This specialist rod comes in a two-piece butt joint for maximum portability while still affording the action and backbone power of a 'one-piece'. As an added bonus, its lower section is further reinforced using multi-layer, multi-directional high modulus carbon for increased lifting power, strength and durability.

EXPLORER

ENGINEERED BY CHIMUSHIHOKU

The Ultralight Explorer is a well-built rod constructed out of super lightweight carbon fibre.

Compared to average ultralight rods that bend easily but lack backbone power, the Ultralight Explorer is engineered to offer the best of both worlds—sensitivity and flexibility. Sought-after features such as fast action, an incredibly flexible tip and a powerful backbone are

combined to offer you a super lightweight rod that is responsive to the lightest bite while maintaining enough backbone to handle any sudden surprise from species such as Tarpon, Peacock bass, Carp, Barramundi, etc. Have your fights with ease, 'cause the Ultralight Explorer has got you covered.

LIGHTWEIGHT CONSTRUCTION

幻影ロッドは非常に弾力性のある、高炭素材料で作られ、それは安定した品質と軽量ロッドの設計とコンポーネントでそのような繊細な、ヘビーデューティーの制作を構築するために職人の技がかかる。

CREW SURF 1403

CREW SURF 1503

As seen on

YouTube | TeamSeahawkFishing

With the Tournament Crew Surf rod, your days of travelling with a bulky and heavy rod are over. Considered one of the lightest and slimmest rods—thanks to its SLIMTECH construction—the Crew Surf achieves a diameter of only 1.5cm at the butt end. For even MORE convenience, we designed this rod with premium foldable rings to fit most rod bags!

This rod is customised specifically for medium-heavy game with a line poundage of 20-50lb and a High Modulus Graphite blank for increased response and sensitivity to the smallest fish bite. Durable, transport-friendly and responsive, the Tournament Crew Surf signals the dawn of a new era for surf casting.

その強さ、快適さ、を体感せよ。

Groundbreaking Japan technology and the first of its kind in the fishing industry, the TEAM SEAHAWK Hyperion 16-strand braided fishing line is an exceptionally strong, high-impact braid line with remarkable high tensile and knot strength. The exterior of the line is coated with a layer of protective lining to prevent discoloration and to maximize endurance. The skillfully engineered 16-strand of the Hyperion is made in a high-density weave which results in unparalleled abrasion resistance, ultra-fine and incomparable-smoothness, enabling more line to be loaded into a spool making the line perfect for offshore saltwater applications including deep sea fishing.

TITANIUM COATED FISHING PLIERS

チタンコーティング

Team Seahawk TSFP007 and TSFP008 fishing pliers are manufactured to be super light and extra tough. Weighing less than 52g (1.8oz) and built to last, our superlight pliers further go through an advanced surface coating using titanium for corrosion-resistance and maximum durability. The pliers easily and cleanly cut through braided and mono lines of any size and come equipped with crimper and ring splitter for rigging and spring loaded handles with safety lock function for comfortable easy one-handed operations.

Features:

- Super lightweight at less than 52g (1.8oz)
- Advanced surface coating using titanium for protection and maximum durability
- Easily and cleanly cuts through braided and mono lines
- Crimper and ring splitter (normal split ring for TSFP007, micro-split ring for TSFP008) for rigging
- Spring-loaded handles with safety lock function for easy one-handed operations
